**PRESS RELEASE**

## **Alpha Data installs latest in Unified Communications for Mubadala's Waha Capital**

**February 2009**

Mubadala Development Company's Waha Capital has implemented complete IP telephony and audio visual solutions at their office in Bateen Area in Abu Dhabi. Alpha Data, a leading systems integrator, carried out the latest technologies specifically for telephony using Nortel's advanced Unified Communication.

Waha Capital is the restructured Oasis International Leasing Company PJSC and is listed in the Abu Dhabi Securities Market. An umbrella organisation for four wholly-owned sector-specific subsidiaries namely Waha Leasing, Waha Land, Waha Maritime, and Waha Financial Services, Waha Capital handles businesses on aircraft leasing, real estate development needs of Abu Dhabi, offshore support and bulk shipping for Abu Dhabi's future acquisitions and joint ventures, and financial solutions.

"Waha Capital is focused in optimising internal synergies among its companies such that it will take full advantage of and will complement Abu Dhabi's vision and plans for growth," said Sujin Balakumaran, IT Manager of Waha Capital. "Integrating technology in our workplace is the best way to effectively connect our four subsidiaries and make our employees more proactive and efficient. We found that the Unified Communication application was the technology that would speed up our transactions internally and externally."

Alpha Data installed complete IP telephony using Unified Communication. Maher Al Abed, Senior Communications Engineer from Alpha Data said, "With Unified Communication, voice, email, fax, video and instant messaging are all connected and can be accessed directly from a computer/ laptop. E-mail, fax and voice messages are delivered to just one inbox."

Integrated AV and a lighting control system was also installed by Alpha Data. "Alpha Data deployed a full conference room solution, including projector, electrical projection screen, DVD, amplifier, speakers, LCD screens and hideaway pop-up interface (for plugging devices to power source) are all connected to one wireless control touch panel where all the systems and even the room lighting can be controlled using just one panel. This technology is very effective that it is already a centralised access to all the devices inside the room," said Hassan Zuhdi, Audio Visuals Account Manager of Alpha Data.

SMATV (Satellite Master Antenna Television) and LCD displays were also installed in the waiting area and other rooms for receiving a number of programs from satellite providers and local broadcast networks. In addition, time attendance and access control systems were also deployed by Alpha Data's AV team.

Commenting on the project, Waha Capital's IT Manager Sujin Balakumaran added, "The tie-up of Microsoft and Nortel in the telephony tool is what really made us choose this communication application. We selected Alpha Data because of its long-time presence in the UAE and the complete resources that it offers. We are extremely satisfied with the installations especially with the works of Mr. Al Abed and their team of very effective engineers."
