

PRESS RELEASE

Canadian Specialist Hospital Goes Wireless through Alpha Data Systems implemented that increase security and speed up patient care

For Immediate Release

September 11, 2006

Canadian Specialist Hospital Dubai, one of Dubai's latest multi-speciality private health care facilities has selected Alpha Data, the UAE's leading systems integrator, to provide the latest in technology to support their advance service offering.

Alpha Data is set to build an infrastructure of a LAN, Wireless LAN, WAN, Servers, Data Centers, Disaster Recovery System, Storage Area Network, Digital and IP telephones, as well as a television system for the hospital.

The latest wireless technologies from Nortel Networks mean that doctors at the hospital can create custom patient documents and convert them into electronic data in a matter of seconds through HP PDA's. Doctors will be able to reserve operating rooms, communicate with nurses and hospital teams, as well as write prescriptions through the network which speeds up all important response times for patients.

"Wireless technology is a growing trend within the healthcare sector. The migration from desktop platforms to a wireless platform will have a significant impact on future healthcare delivery systems. Using PDA system, our physicians, nurses and healthcare professionals, are dramatically enhancing patient care and improving efficiency." said Dr. Suhail Kazim

"Giving physicians information sooner means they can act on it more quickly." Dr. Suhail Kazim pointed out. That means physicians can make more timely decisions.

"A crucial benefit of these systems is that patient history is accessible around the clock. Physicians can enter patient information as well as receive it; they will also be able to get the full advantage of the system from their homes." said Gigi George, Product Manager Enterprise Solution at Alpha Data.

A radio frequency identification system – the first in the region was also introduced into the hospital with use for newborn babies. "Canadian Specialist Hospital was looking for a specific tagging system for newborn babies and mothers to ensure that the records, safety and security were maintained for them, said Michel Harb, Head of Networking at Alpha Data. "We proposed this solution as it tracks the location of the babies at all times through the wireless network and ensures that they are never far away from the mother whilst at the hospital."

"Alpha Data has been chosen based on its strong reputation in the UAE market in addition to their significant experience of over 25 years. The solutions proposed by Alpha Data were fully in line with the hospital's mission and vision to ensure that all our patients are both comfortable secure and that our services are unparalleled," said Mr. Mohammed Rashid Al Falasi, Chairman of Canadian Specialist Hospital.
